

Setting Up Landlord Group (not splitting bales)

Some landlords do not actually get a number of bales from the producer, but get a rebate paid to them. The following describes how to set up the Landlord group to define the percentages.

See the Landlord Group setup screen below.

Note that in this landlord group example, there are two landlords, LL1-1 and LL1-2.

Each has their own amount entered for distribution and rebate.

To enter or change any of the information for the LLord ID, click on the line to select, then click on the blue triangle to edit.

Use the tab key to move to the input field.

When finished, click Save.

LLord ID	Name	Charge%	Seed%	Dist%	Transfer%	Rebate%
LL1-1	Land Heir One	0.000	0.000	16.500	0.000	16.500
LL1-2	Land Heir Two	0.000	0.000	16.500	0.000	16.500

LLord ID	Name	Charge%	Seed%	Dist%	Transfer%	Rebate%
LL1-1	Land Heir One	0.000	0.000	16.500	0.000	16.500
LL1-2	Land Heir Two	0.000	0.000	16.500	0.000	16.500

Use the **Calculate Rebates** option in **Utilities** to edit the rebate table and enter the rebate amount. Then use Calculate Rebates and enter the Producer ID that the Landlord group applies.
